Senior Frontend Developer (m/f)

Who The Company Is
Our client is a very fresh startup in legal tech, but is backed by a multinational enterprise - so funding is more than safe. The business prototype has already been running for quite a while and has a great product-market fit. Now, we are building a team of entrepreneurs and experts in order to scale up the business. In the first step, Europe is the focus, but in the long run our client is seeking to build a well-known brand for a worldwide business. This includes having subsidiaries in every bigger city. The HQ is located in Cologne, Germany.

What You Do
- Work within an agile team employing Scrum.
- Build up the whole frontend from scratch.
- Work closely with the designers to get the best look and feel for the applications.
- Haggle with your technical PO about solution approaches and estimates.
- Help to write stories and implement them.
- Code great features, make sure they are tested and meet the quality guidelines.

What Is Offered
- Our client is easygoing with humble people all over the place. They love to create a work environment where everybody feels comfortable.
- You will be faced with technical challenges on a daily basis. They want to build innovative products and they want you to build them within the team.
- You have your say. They need your experience and they are willing to listen.
- Say goodbye to agency hours! Everybody within the company also likes to spend time with their families and friends.
- Competitive compensation for good performance.
Who You Are

- More than 5 years experience in frontend development.
- Developed frontends for responsive websites as well as large web applications.
- You wrote a responsive theme for Wordpress, Typo3, Drupal or any other CMS out there.
- Profound knowledge of HTML5/CSS3. You are familiar with both Foundation and Bootstrap and know when to use what.
- You’ve learned from experience which browsers suck. Still, you can deal with their irks and quirks.
- You love react.js, but you also like vue.js in a way. You have a strong opinion on whether to use TypeScript or Flow.
- Git, npm, grunt, bower and gulp are part of your everyday working routine.
- You are a go to person, who is motivated to deliver great functionality to users and you know what “pragmatic” means.
