Senior Web Developer (m/f)

Who The Company Is
Our client is a very fresh startup in legal tech, but is backed by a multinational enterprise - so funding is more than safe. The business prototype has already been running for quite a while and has a great product-market fit. Now, we are building a team of entrepreneurs and experts in order to scale up the business. In the first step, Europe is the focus, but in the long run our client is seeking to build a well-known brand for a worldwide business. This includes having subsidiaries in every bigger city. The HQ is located in Cologne, Germany.

What You Do
- Work within an agile team employing Scrum.
- Build up the whole IT landscape from scratch.
- Design the development and deployment process and live it.
- Haggle with your technical PO about solution approaches and estimates.
- Help to write stories and implement them.
- Code great features, make sure they are tested and meet the quality guidelines.
- Manage the code base as well as the underlying infrastructure in a DevOps approach - You build it, you run it!

Tech Stack
- Docker, docker-compose, docker-swarm
- Terraform and Ansible to build infrastructure in AWS
- PHP - Symfony
- react.js
What Is Offered

- Our client is easygoing with humble people who love to create a work environment where everybody feels comfortable.
- You will be faced with technical challenges on a daily basis. The goal is to build innovative products and they will be build by the team.
- You have your say. Your experience is needed and everybody is willing to listen.
- Say goodbye to agency hours! Within the company everybody likes to spend time with their families and friends.
- Competitive compensation for good performance.

Who You Are

- More than 5 years experience in developing scalable web applications.
- Developed front- and backend and maintained the applications afterwards.
- Profound experience in at least two of the following languages: PHP, Python, Ruby, Java, C# and the corresponding frameworks.
- Very good understanding of relational databases like MySQL or Postgres, experience with key-value-stores like Redis would be nice.
- Knowledge on the ins and outs of git, unit and integration testing, Jenkins and deployment managers (e.g. Capistrano).
- Comfortable in dealing with technologies like ElasticSearch, Varnish, Docker, Puppet, ELK.
- LAMP is something you don’t expect light coming out of it but you can set it up in no time.
- You know that scaling doesn’t only depend on the system but mostly on the programming style.
- You are familiar with IP addresses, network masks, DNS and also firewalls.
- Experience with CMS and Machine Learning would be a plus.
- You are a go to person, who is motivated to deliver great functionality to users and you know what “pragmatic” means.
